PROFESSIONAL SUMMARY

MCA graduate (2026, CGPA: 8.5) with a strong foundation in object-oriented programming, relational databases, and web application development. Hands-on experience across the full software development life cycle — requirements analysis, design, coding, testing, and defect resolution — gained through Agile internships and independent projects. Comfortable picking up new languages, frameworks, and tools quickly, with a strong analytical mindset and clear written and verbal communication skills.

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL
- **Web:** HTML, CSS, JavaScript, React, Angular JS
- **Databases:** MySQL, Firebase, MongoDB, JDBC — schema design, query writing, and data integrity validation
- **Frameworks & Tools:** Flask, TensorFlow, PyQt6, Git/GitHub, VS Code, Linux
- **Core Concepts:** SDLC, OOP, Data Structures & Algorithms, OS, Networking, Agile, Debugging & Root-Cause Analysis

INTERNSHIPS

Software Developer Intern — Vrittify AI **Feb 2026 – May 2026**

- Contributed to the OCR module of an AI-based authorship verification system as part of a collaborative Agile team.
- Worked closely with the team on testing and integration, identifying and resolving defects across the document processing workflow.
- Implemented image preprocessing techniques (grayscale conversion, denoising, adaptive thresholding) and integrated Tesseract OCR to improve text extraction accuracy on handwritten and typed documents.

AI Developer Intern — Infosys Springboard **Oct 2025 – Dec 2025**

- Performed data preprocessing, validation, and analysis using Python to improve model accuracy and reliability, partnering with the team on structured testing and clear communication.
- Developed and evaluated machine learning models for oil spill detection and environmental monitoring.

Front End Web Developer Intern — AICTE – Edunet Foundation **Aug 2025 – Sep 2025**

- Developed a responsive portfolio website using HTML, CSS, and JavaScript, validating functionality across multiple devices and screen sizes, and designing user-friendly UI components.

PROJECTS

Automated Dual-Stack Email Firewall & Malicious URL Blocker | **Python, TensorFlow, Flask, PyQt6**

- Developed a two-layer cyber security system combining a CNN-based email classifier (Layer 1) and a real-time URL interceptor (Layer 2) for end-to-end phishing protection.
- Trained a CNN deep learning model to classify phishing emails by analyzing email content fetched via the IMAP protocol.
- Engineered the URL interception layer to inspect outbound links in real time and flag malicious patterns before they reached the user.
- Built a real-time desktop monitoring dashboard using PyQt6 to visualize live threat alerts and system status.
- Structured the project as modular Python components (classifier, interceptor, and UI) to keep detection logic independently testable and maintainable.
- Used Git for version control throughout development, iterating on model accuracy and dashboard usability across multiple revisions.

AgriVision AI: South India Crop & Yield Advisory System | **Python, Flask, Scikit-learn, Pandas, SQL**

- Built a South India crop and yield advisory platform using Flask and ML models trained on 2,500 samples across 25 crops.
- Trained and compared Random Forest, SVM, and Neural Network (MLP) classifiers, achieving 92.16% mean accuracy with stratified 5-fold cross-validation and 90.80% on a held-out test set, with a data-leakage audit.
- Built a Random Forest yield regressor (R^2 = 0.9285, MAE 1.08 t/ha) on 64,275 historical records and integrated live Open-Meteo weather forecasts with a fault-tolerant fallback.
- Designed a SQL ORM database layer (PostgreSQL, MySQL, SQLite) with REST endpoints for history and status.

EDUCATION

- MCA (Postgraduate), CGPA: 8.5 — JSS Academy of Technical Education, Bengaluru **Dec 2024 – Jun 2026**
- BSc (Bachelor of Science), 82% — Sahyadri Science College, Shivamogga **Nov 2020 – Sep 2023**
- PUC (Intermediate) — Govt. PU College, Sagar **Aug 2018 – April 2020**
